

— FEATURE × OBJECTIVE × METRIC

Every feature has *one job*: sell more coffee.

A strategic audit of every UI box in the Celsius Coffee pickup app
— mapped to the one thing each is supposed to do, and the
metric that proves it's doing it.

THE FRAME

Sales = *Orders* × *AOV*

01. The strategic frame

The pickup app’s only reason to exist is to grow sales. Sales is the product of **orders** (how many transactions) and **AOV** (how much each transaction is worth). Every feature in the app must push one of these — or both. The table below tags each feature by which lever it pulls.

THE WHOLE GAME

Two levers. Every feature ladders to one.

Sales = Orders × AOV

ORDERS

 drives transaction count — acquisition, retention, frequency, friction reduction.

AOV

 drives basket size — modifiers, cross-sell, bundles, multi-item incentives.

BOTH

 does both. Rare and powerful.

02. Feature audit · every box, every metric

01. Home app/index.tsxGet the user from app-open to "I know what I want" in < 10 seconds.			
FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Poster carousel	BOTH	Pushes new launches (new orders) + premium SKUs (AOV).	poster_tapped · per-poster CTR • GAP
Member greeting + points	ORDERS	Shows balance & tier on landing — a forward reason to come back.	badge → /rewards CTR • GAP
Outlet picker pill	ORDERS	Surfaces real-time busy/closed state — prevents wasted-trip churn.	mismatched-outlet rate at checkout • GAP
"Your usual" carousel	ORDERS	One-tap reorder of last drink — collapses decision time, raises frequency.	usual → cart conversion • GAP
Claimable vouchers row	ORDERS	One-tap claim of welcome/promo/mystery — creates urgency to visit.	claim → order conversion • GAP
Active missions row	ORDERS	"3 visits this week → reward" — engineers a frequency streak.	mission completion % • GAP
Featured products	AOV	Curated cross-sell — pulls add-ons into baskets the user wasn't there for.	featured CTR · featured-driven AOV • GAP
02. Menu & product detailapp/menu.tsx · app/product/[id].tsxTurn intent into a fully-configured cart-add.			
FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Category pills	ORDERS	Fast browse → faster decision → more sessions converting.	category CTR • GAP
Search bar	ORDERS	Bypasses browse for known intent — high-conversion path.	search → cart conversion • GAP
Product detail	ORDERS	Gateway to add-to-cart. PDP views = top of order funnel.	product_viewed • TRACKED

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Modifiers (required + optional)	AOV	The single biggest AOV lever. Size, milk, syrups, shots — each priced incrementally.	modifier attach rate · AOV uplift • GAP
Quantity stepper	AOV	Encourages multi-item orders without leaving PDP.	avg qty per add • GAP
Add to cart CTA	ORDERS	The conversion event. Sticky bottom, live total shown.	cart_add · PDP → cart conv. • TRACKED

03. Cart & checkout

app/cart.tsx · app/checkout.tsx

Convert cart into a paid order with zero friction.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Apply voucher slot	BOTH	Pulls deadline-urgent visits forward (Orders). "Free pastry with drink" forces multi-item (AOV).	reward_reserved · voucher apply rate • TRACKED
Price summary & SST	ORDERS	Transparent breakdown reduces abandon at total reveal.	cart → checkout conv. • GAP
Payment methods (4)	ORDERS	Card · Apple Pay · FPX · GrabPay — meets the buyer where they pay.	method mix · per-method success • TRACKED
Zero-amount bypass	ORDERS	Skips Stripe sheet on fully-discounted orders → no payment-step abandonment.	payment_skipped rate • TRACKED
Place order CTA	ORDERS	The final conversion event in the funnel.	checkout_started → order_placed • TRACKED

04. Orders list & order detail

app/orders.tsx · app/order/[id].tsx

Close the loop from order to "drink in hand". Set up the next order.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Reorder button	ORDERS	Highest-value action in the app. Hydrates cart from past order → one tap to a new order.	reorder → order_placed • GAP
Order stepper (live status)	ORDERS	Reduces "is it ready?" anxiety → trust → repeat use.	time-to-ready by outlet • GAP
Mystery Bean reveal	ORDERS	Variable-reward scratch card. Dopamine hook that drives the next order.	reveal rate · post-reveal D7 return • GAP
Swipe-to-collect	ORDERS	Confirms pickup without barista — operationally cheaper, faster handoff.	swipe / auto / barista mix • GAP
Pending-payment retry	ORDERS	Recovers orders that failed payment — direct revenue rescue.	retry → success rate • GAP

05. Rewards & loyalty

app/rewards.tsx

Convert points and vouchers into next visits. Hoarded rewards = failed loop.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Points (Beans) balance	ORDERS	Earnable forward currency — a reason to return that compounds with each visit.	orders / active member / month • GAP

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Voucher wallet	ORDERS	Active vouchers visible → next-visit prompt every app open.	voucher utilisation (used / issued) ● GAP
Voucher expiry deadlines	ORDERS	The urgency engine. "Use by Friday" pulls a visit forward.	expired-without-use % ● GAP
Free-item vouchers	AOV	"Free pastry with drink" — looks like a discount, behaves like an AOV lift.	avg items / order with voucher ● GAP
Missions / challenges	ORDERS	Behavioural nudge that engineers a 2-3 visit streak.	mission completion % · post-streak D30 ● TRACKED
Spend Beans catalog	ORDERS	Points sink. Redemption brings the user back in.	redemption rate ● GAP

06. Tier & membership

app/tier-benefits.tsx

Status + fixed discount per tier. Retains the top of the customer pyramid.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Tier ladder (6 tiers)	ORDERS	Bronze→Silver→Gold→Elite. Status retains; loss-aversion locks in.	tier retention quarter-over-quarter ● GAP
Earn multiplier per tier	ORDERS	Higher tier = more Beans per RM = stronger reason to keep ordering on app.	app share by tier ● GAP
Quarterly unlock window	ORDERS	"Spend RM X in Y days to unlock {next}" — quarter-end spike pressure.	quarter-end-week order spike ● GAP
Free birthday drink	ORDERS	Annual emotional moment — forces the user back into the app once a year minimum.	birthday-month visit rate ● GAP
Tier perks ("3rd drink free")	AOV	Multi-item-unlock reward — pulls 1-item orders into 2- or 3-item orders.	items / order, by tier ● GAP

07. Account & identity

app/account.tsx

Sign-up, profile, and the link between the app member and the in-store customer.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Phone+OTP sign-in	ORDERS	Frictionless onboarding → faster first order.	login_success · OTP funnel ● TRACKED
Browse-without-auth	ORDERS	Lets curious users see menu before committing → softens the signup gate.	browse → signup rate ● GAP
Profile completion (birthday)	ORDERS	Birthday field gates the free-birthday-drink reward.	% members with birthday filled ● GAP
Identity QR / member card	ORDERS	Connects walk-in orders to the member — extends loyalty to in-store too.	POS scan rate ● GAP

08. Viral surfaces

app/referral.tsx ·
app/wrapped.tsx

Turn existing customers into the acquisition channel. The cheapest CAC.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Referral code share	ORDERS	Existing customer brings in a new buyer; both sides get a free drink.	referral → first-order conv. · CAC • GAP
Coffee Wrapped	ORDERS	Annual recap, share-as-image → organic social distribution + retention moment.	share rate · attributed installs • GAP
Welcome voucher (new user)	ORDERS	Lowers the bar to the first transaction post-signup.	signup → first-order conv. • GAP

09. Cross-cutting surfaces

Push · BottomNav · Posters ·
MaintenanceBanner

Mechanisms that aren't on one screen but affect every order.

FEATURE	OBJECTIVE	HOW IT DRIVES SALES	METRIC
Push notifications	ORDERS	Re-activation channel — "order ready", "voucher expiring", "back in stock". Free re-engagement.	push → open → order rate • GAP
Reward badge on BottomNav	ORDERS	Persistent visual cue of unclaimed value → drives /rewards visits.	badge → /rewards CTR • GAP
Pickup speed (the app itself)	ORDERS	If app orders aren't faster than walk-in, frequency caps. Core promise.	app share of outlet orders · median wait • GAP

03. The instrumentation gap

11 Amplitude events fire today. They cover the order-funnel mechanics well but say **almost nothing about the loyalty & viral machine** — which is where the orders multiplier lives. Below: the five events that unlock the rest.

Before you trust any number

Amplitude is gated on a non-empty `EXPO_PUBLIC_AMPLITUDE_API_KEY` and a fresh native build that bakes in the native module. Confirm both before treating dashboards as real.

01

screen_viewed

Funnel for free

Fire on every screen mount with

screen_name

Unlocks landing-rate metrics across the whole app.

02

voucher_claimed

voucher_used

Loyalty loop

Issued ÷ claimed ÷ used. Tells us whether vouchers are a cost or a sales lever.

03

order_collected

Skip-queue proof

Include method (swipe / auto / barista).

Measures the core value prop.

04

reorder_tapped

Highest-value action

One-tap reorder is the cheapest path to a repeat order. Track CTR + reorder →

order_placed

05

referral_shared

Viral lever

The one event that lights up acquisition. Without it, viral CAC is faith-based.
